This product has been designed to be applied directly underwater with the minimum of preparation and mess. It is ideal for repairing cracks and small leaks in swimming pools whilst they are full.

The advantages of Pool-fix™ are:

- Little product dispersion during application (a common problem with this type of application).
- Forms a very smooth paint-like finish – can be coloured to match the pool - (normal colour blue).
- It is very easy to apply requiring very little surface preparation – no special training or equipment needed.
- Versions available for both crack and grouting repair.
- Its smooth finish is not a scratch hazard to swimmers.
- The product cures underwater so the pool does not have to be drained or refilled saving downtime.
- Can withstand the physical stresses caused by wave action.
- Superb adhesion - pull off tests when applied to wet substrates surpass 1350 psi before cohesive failure.
- Can adhere to most tile substrates.
- It contains no solvent or styrene, making it very user and eco-friendly.

Chemco manufactures an extensive range of products which are designed to meet every corrosion and containment challenge. We offer unlimited technical support including site survey, estimation, inspection and application assistance. An extensive list of our products and industry uses are listed below:

Products

Glassflake coatings
Coatings in contact with food & beverage
Damp or green concrete primers and coatings
Floor coatings
Rust converters and primers
Under-water coatings
Anti-static and conductive coatings
Elastomeric coatings
Fire retardant & intumescent coatings
Ceramic coatings

Industry

Petro-chemical
Food and beverage (including wine & beer tanks)
Water & sewage (including drinking water)
Nuclear and power generation
Maintenance and new construction
Marine industry (including ballast tank)
Ministry of defence
Car parks, industrial warehouses
Fire and heat protection
Heat insulation
