

Pylon Coating

Our pylon coating system comprises a **single coat**, innovative **wet & rust tolerant** solution:

- **Epo-chem™ RL 500PF**

Chemco's pylon coating system allows significant project cost savings to be achieved through using a single coat solution and a product which can be applied to a minimally prepared substrate; which also offers additional labour savings as opposed to using 2 or 3 coat solutions.

There are also no humidity or dew point restrictions for coating application.

Additionally, there are no recoating limitations with this product which allows future maintenance and repair work to be carried out with ease and at low cost.

System Benefits:

- **Wet & rust tolerant**
- **Single coat system**
- Minimal surface preparation required
- Can be applied on wet substrates
- Excellent adhesion to galvanised steel
- No humidity or dew point restrictions for application
- No recoating limitations for maintenance work
- Reduced labour costs
- Significantly reduced H&S and Fire Hazard
- Long-term **maintenance-free** performance
