PROTECTIVE COATINGS

**UNDERWATER
COATINGS**

Our underwater coating systems offer a cost-effective and practical solution to underwater repair & maintenance.

These **solvent-free** systems are able to provide long-term corrosion protection whilst also reducing environmental impact.

The key advantage of these systems is their ability to be applied to underwater structures which cannot be removed; including jetties, swimming pools and pilings.

These systems are:

- **Diver-cote™**
- **Pool-fix™**

SYSTEM 1: DIVER-COTE™

A **solvent-free, wet tolerant** glassflake coating/filler which is utilised for a wide range of underwater applications; protection of risers, pipes, jetties, pilings and other steel & concrete structures above & below the splash zone.

This system is available in 4 versions:

RA 500UW-F	Filler or crack repair compound
RA 500UW-HV	High viscosity for deep cracks & holes
RA 500UW-LV	Low viscosity for large areas
RA 500UW-S	Underwater adhesive

SYSTEM 1: BENEFITS

- **Solvent-free**
- Little or no paint dispersion in water for eco-friendly application
- Very smooth, non-porous, paint-like finish
- Excellent abrasion and erosion resistance
- Can withstand severe and physical stresses caused by wave action
- Excellent adhesion to substandard surface preparation expected underwater
- Long-term maintenance free protection

● SYSTEM 2: POOL-FIX™

A **solvent-free, wet tolerant** coating system specifically designed for the repair of underwater areas; especially for ceramic tiles within swimming pools. This system is ideal for repairing swimming pools without the requirement to empty the pool.

This system is available in 2 versions:

Pool-fix™	Small holes, leaks and cracks
Pool-fix™ Filler/Grout	Grout, large cracks or fixing tiles

● SYSTEM 2: BENEFITS

- **Solvent-free**
- Little or no paint dispersion in water for eco-friendly application
- Very smooth, paint-like finish
- Excellent adhesion properties
- Easy to apply, requiring little surface preparation
- No specialist training or equipment requirements
- Can withstand physical stresses caused by wave action
- Huge cost reduction as does not require the pool to be emptied
- Significantly improved Health & Safety standards
- Repairs holes, leaks, cracks, chips and defects with little downtime
- Highly resistant to chlorinated water and pool cleaning products
